

# 011. Container With Most Water

## 011 Container With Most Water

- Two Pointer+Array

### Description

Given  $n$  non-negative integers  $a_1, a_2, \dots, a_n$ , where each represents a point at coordinate  $(i, a_i)$ .  $n$  vertical lines are drawn such that the two endpoints of line  $i$  is at  $(i, a_i)$  and  $(i, 0)$ . Find two lines, which together with x-axis forms a container, such that the container contains the most water.

Note: You may not slant the container and  $n$  is at least 2.

### 1. Thought Line

### 2. Two Pointer+Array

```
1 class Solution {
2 public:
3     int maxArea(vector<int>& height) {
4         int water = 0;
5         int i = 0, j = height.size() - 1;
6         while (i < j) {
7             int h = min(height[i], height[j]);
8             water = max(water, (j - i) * h);
9             while (height[i] <= h && i < j) i++;
10            while (height[j] <= h && i < j) j--;
11        }
12        return water;
13    }
14 };
```
