

011. Container With Most Water

011 Container With Most Water

- Two Pointer+Array

Description

Given n non-negative integers a_1, a_2, \dots, a_n , where each represents a point at coordinate (i, a_i) . n vertical lines are drawn such that the two endpoints of line i is at (i, a_i) and $(i, 0)$. Find two lines, which together with x-axis forms a container, such that the container contains the most water.

Note: You may not slant the container and n is at least 2.

1. Thought Line

2. Two Pointer+Array

```
1 class Solution {
2 public:
3     int maxArea(vector<int>& height) {
4         int water = 0;
5         int i = 0, j = height.size() - 1;
6         while (i < j) {
7             int h = min(height[i], height[j]);
8             water = max(water, (j - i) * h);
9             while (height[i] <= h && i < j) i++;
10            while (height[j] <= h && i < j) j--;
11        }
12        return water;
13    }
14 };
```
