

053. Maximum Subarray

053 Maximum Subarray

- Divide and Conquer+array
- Dynamic Programming+array

Description

Find the contiguous subarray within an array (containing at least one number) which has the largest sum.

For example, given the array `[-2,1,-3,4,-1,2,1,-5,4]`,
the contiguous subarray `[4,-1,2,1]` has the largest sum = `6`.
