061. Rotate List

061 Rotate List

• Two pointers+Linked List

Description

Given a list, rotate the list to the right by k places, where k is non-negative.

Example:

```
Given 1->2->3->4->5->NULL and k=2, return 4->5->1->2->3->NULL.
```

1. Thought line

2. Two pointers+Linked List

```
1 /**
 2 * Definition for singly-linked list.
 3 * struct ListNode {
         int val;
         ListNode *next;
         ListNode(int x) : val(x), next(NULL) {}
 7 * };
 8 */
9 class Solution {
10 public:
11
     ListNode* rotateRight(ListNode* head, int k) {
          if (head==nullptr || head->next==nullptr) return head;
12
          // Find the size of list: N
14
15
          int N = 0;
16
