# 011. Container With Most Water

## 011 Container With Most Water

• Two Pointer+Array

#### **Description**

Given n non-negative integers  $a_1$ ,  $a_2$ , ...,  $a_n$ , where each represents a point at coordinate  $(i, a_i)$ . n vertical lines are drawn such that the two endpoints of line i is at  $(i, a_i)$  and (i, 0). Find two lines, which together with x-axis forms a container, such that the container contains the most water.

Note: You may not slant the container and n is at least 2.

### 1. Thought Line

#### 2. Two Pointer+Array

```
class Solution {
public:
    int maxArea(vector<int>& height) {
        int water = 0;
        int i = 0, j = height.size() - 1;
        while (i < j) {
            int h = min(height[i], height[j]);
            water = max(water, (j - i) * h);
            while (height[i] <= h && i < j) i++;
            while (height[j] <= h && i < j) j---;
        }
        return water;
    }
};</pre>
```
