074. Search a 2D Matrix

074 Search a 2D Matrix

• Binary Search+array

Description

Write an efficient algorithm that searches for a value in an m x n matrix. This matrix has the following properties:

- · Integers in each row are sorted from left to right.
- · The first integer of each row is greater than the last integer of the previous row.

For example,

Consider the following matrix:

```
[
[1, 3, 5, 7],
[10, 11, 16, 20],
[23, 30, 34, 50]
]
```

Given target = 3, return true.
