# 016. 3Sum Closest

## 016 3Sum Closest

• Two Pointers

#### **Description**

Given an array S of n integers, find three integers in S such that the sum is closest to a given number, target. Return the sum of the three integers. You may assume that each input would have exactly one solution.

```
For example, given array S = \{-1 \ 2 \ 1 \ -4\}, and target = 1.
The sum that is closest to the target is 2. (-1 + 2 + 1 = 2).
```

```
1 class Solution {
 2 public:
 3
       int threeSumClosest(vector<int>& nums, int target) {
 5
           if (nums.size() < 3) return 0;</pre>
 6
           sort(nums.begin(), nums.end());
           int N = nums.size(), sum = 0, dif = INT_MAX;
 8
           for (int i = 0; i \le N-3; ++i){
 9
               if (i > 0 \& nums[i-1] == nums[i]) continue;
               int front = i+1, tail = N-1;
10
11
               while(front < tail){</pre>
12
                    int sum_temp = nums[i] + nums[front] + nums[tail];
                   if (sum_temp == target) return target;
13
14
15
                        if (abs(sum_temp - target)<dif){</pre>
                           dif = abs(sum temp - target);
16
17
                            sum = nums[i] + nums[front] + nums[tail];
18
19
                        if(sum_temp<target) {</pre>
                           while(front+1 < tail \&\& nums[front+1] == nums[front]) ++front;
20
21
22
23
                        else{
                            while(tail-1 >front && nums[tail-1] == nums[tail]) --tail;
24
25
26
27
28
29
30
            return sum;
31
32 };
```
