002. Add Two Numbers

002 Add Two Numbers

• Linked List+Math

Description

You are given two **non-empty** linked lists representing two non-negative integers. The digits are stored in **reverse order** and each of their nodes contain a single digit. Add the two numbers and return it as a linked list.

You may assume the two numbers do not contain any leading zero, except the number 0 itself.

Example

```
Input: (2 -> 4 -> 3) + (5 -> 6 -> 4)
Output: 7 -> 0 -> 8
Explanation: 342 + 465 = 807.
```

1. Thought Line

(1) Discuss how to reverse a linked list

```
1 ListNode* reverseListOrder(ListNode* lst){
     ListNode* dummyHead = new ListNode(0);
 3
      ListNode* dummyTail = nullptr;
     ListNode* insertTo = dummyTail;
     while(lst!=nullptr){
 6
      ListNode* insertNode = new ListNode(lst->val);
 7
      insertNode->next = insertTo;
 8
      dummyHead->next = insertNode;
 9
      insertTo = insertNode;
10
       lst = lst->next;
11
      return dummyHead->next;
12
13 }
```

(2) Math logic

- Need to analyze the carry direction.
- in "2 -> 4 -> 3"+"5 -> 6 -> 4", it is from left to right
- in "342"+"465", it is from right to left

2. Linked List + Math

```
2 * Definition for singly-linked list.
 3 * struct ListNode {
        int val;
 5 *
         ListNode *next:
         ListNode(int x) : val(x), next(NULL) {}
 6 *
 7 * };
 8 */
 9 class Solution {
10
11 private:
12 ListNode* addList(ListNode* l1, ListNode* l2){
      ListNode* dummyHead = new ListNode(0);
13
14
          ListNode* head = dummyHead;
     signed int carry = 0;
15
```

```
16
           while(l1!=nullptr || l2!=nullptr || carry !=0){
17
               int l1Val = (l1!=nullptr) ? l1->val : 0;
18
               int l2Val = (l2!=nullptr) ? l2->val : 0;
19
               int sumOfl1l2carry = l1Val + l2Val + carry;
20
               head->next = new ListNode (sumOfl1l2carry%10);
21
22
               carry = sumOfl1l2carry/10;
23
               l1 = (l1!=nullptr)? l1->next : nullptr;
24
25
               l2 = (l2!=nullptr)? l2->next : nullptr;
               head = head->next;
26
27
28
           return dummyHead->next;
29
30
31 public:
       ListNode* addTwoNumbers(ListNode* l1, ListNode* l2) {
33
           if (l1==nullptr) return l2;
34
           if (l2==nullptr) return l1;
           ListNode* l1Addl2 = addList(l1,l2);
35
36
           return l1Addl2;
37
38 };
```
