022. Generate Parentheses

021 Merge Two Sorted Lists

- $\bullet \quad \textbf{Backtracking} + \text{string}$
- •

Description

Given n pairs of parentheses, write a function to generate all combinations of well-formed parentheses.

For example, given n = 3, a solution set is:

```
[
"((()))",
"(()())",
"()(())",
"()(())",
"()(())"
```

1. Thought line

2. Backtracking+string

```
1 class Solution {
 2 private:
       void generateParenthesis_fct(int lfCount, int rtCount, int n, string str, vector<string>& result){
 3
           if (lfCount<rtCount || lfCount>n ||rtCount>n || n<=0) return;</pre>
 4
 5
           if (lfCount==n && rtCount==n) {
 6
           result.push_back(str);
 7
               return;
 8
           // insert "("
 9
10
           if (lfCount<n)</pre>
11
              generateParenthesis_fct(lfCount+1, rtCount, n, str+"(", result);
12
13
           if(lfCount>rtCount)
               generateParenthesis_fct(lfCount, rtCount+1, n, str+")", result);
14
15
16 public:
       vector < string > \ generate Parenthesis (int \ n) \ \{
17
18
           vector<string> result;
19
           generateParenthesis_fct(0, 0, n, "", result);
20
           return result;
21
22 };
```
