047. Permutations II

047 Permutations II

• BackTracking+array

Description

Given a collection of numbers that might contain duplicates, return all possible unique permutations.

For example,

[1,1,2] have the following unique permutations:

```
[
    [1,1,2],
    [1,2,1],
    [2,1,1]
]
```

- 1. Thought line
- 2. BackTracking+array

```
class Solution {
    \textit{void} \ \ \text{backTracking\_fct} (\textit{vector} < \textit{vector} < \textit{int} > \& \ \ \text{result}, \ \ \textit{vector} < \textit{int} > \& \ \ \text{nums}, \ \ \textit{vector} < \textit{bool} > \& \ \ \text{flag},
                          vector<int>& temp){
          if (temp.size()==nums.size()){
              result.push_back(temp);
         for (int i = 0; i<=flag.size()-1; ++i){</pre>
               if (!flag[i]){
                   temp.push_back(nums[i]);
                   flag[i] = true;
                   backTracking_fct(result, nums, flag, temp);
                   flag[i] = false;
                   temp.pop_back();
                   while(i+1 \le flag.size()-1 \&\& nums[i] == nums[i+1])
    vector<vector<int>>> permuteUnique(vector<int>& nums) {
         vector<bool> flag(nums.size(),false);
         vector<int> temp;
         sort(nums.begin(), nums.end());
         backTracking_fct(result, nums, flag, temp);
          return result;
```
