002. Add Two Numbers

002 Add Two Numbers

- **Linked List+Math**

Description

You are given two **non-empty** linked lists representing two non-negative integers. The digits are stored in **reverse order** and each of their nodes contain a single digit. Add the two numbers and return it as a linked list.

You may assume the two numbers do not contain any leading zero, except the number 0 itself.

Input: (2 -> 4 -> 3) + (5 -> 6 -> 4)

Output: 7 -> 0 -> 8

Explanation: 342 + 465 = 807.

1. Thought Line

(1) Discuss how to reverse a linked list

```
 1 ListNode* reverseListOrder(ListNode* lst){
 2     ListNode* dummyHead = new ListNode(0);
 3     ListNode* dummyTail = nullptr;
 4     ListNode* insertTo = dummyTail;
 5     while(lst!=nullptr){
 6     ListNode* insertNode = new ListNode(lst->val);
 7     insertNode->next = insertTo;
 8     dummyHead->next = insertNode;
 9     insertTo = insertNode;
10     lst = lst->next;
11     }
12     return dummyHead->next;
13 }
```

(2) Math logic

- Need to analyze the carry direction.
- in "2 -> 4 -> 3"+"5 -> 6 -> 4", it is from left to right
- in "342"+"465", it is from right to left

2. Linked List + Math

```
 1 /**
 2  * Definition for singly-linked list.
 3  * struct ListNode {
 4  *     int val;
 5  *     ListNode *next;
 6  *     ListNode(int x) : val(x), next(NULL) {}
 7  * };
 8  */
 9 class Solution {
10
11 private:
12     ListNode* addList(ListNode* l1, ListNode* l2){
13         ListNode* dummyHead = new ListNode(0);
14         ListNode* head = dummyHead;
15         signed int carry = 0;
16         while(l1!=nullptr || l2!=nullptr || carry !=0){
17             int l1Val = (l1!=nullptr) ? l1->val : 0;
18             int l2Val = (l2!=nullptr) ? l2->val : 0;
19             int sumOfl1l2carry = l1Val + l2Val + carry;
20
21             head->next = new ListNode (sumOfl1l2carry%10);
22             carry = sumOfl1l2carry/10;
23
```

```cpp
            l1 = (l1!=nullptr)? l1->next : nullptr;
            l2 = (l2!=nullptr)? l2->next : nullptr;
            head = head->next;
        }
        return dummyHead->next;
    }

public:
    ListNode* addTwoNumbers(ListNode* l1, ListNode* l2) {
        if (l1==nullptr) return l2;
        if (l2==nullptr) return l1;
        ListNode* l1Addl2 = addList(l1,l2);
        return l1Addl2;
    }
};
```
